

○

Inside the Lab, execution is genuinely well supported

WELL BUILT

Discovery, Market, Roadmap, Revenue, Use of Funds, Cap Table and the Pitch Deck builder all work, share data honestly, and never fabricate a number.

○

...until the founder tries to formalize the company with a co-founder

BROKEN

The Co-founder Agreement generator — a Week-4 deliverable — 404s on production, on both the Lab tool and the general legal page. It's a real, built feature that simply cannot run where it matters.

E

PRODUCT OPPORTUNITIES

Where to spend the next quarter

Ranked by trust/product impact against effort. As with the investor audit, the first few are honesty and reliability fixes — not redesign work — that should ship before any visual work begins.

FIX FIRST	Patch the /api/legal/entities data leak Zero-effort cross-tenant exposure firing on a normal page load — the single most severe finding across both halves of this audit.	Hours server fix
FIX FIRST	Port the Co-founder Agreement route to the worker A real, built Week-4 deliverable that 404s in production on both surfaces that offer it.	Days backend port
FIX FIRST	Fix Marketplace's Services crash A field-name mismatch guarantees a crash the moment any offering exists — cheap fix, directly blocks a real feature.	Hours frontend/backend alignment
