PROBLEM

Pulled from Customer Discovery · 30 interviews logged

Distributed teams lose hours to fragmented async work

1

Context scattered across five disconnected tools

14 of 18

2

No single source of truth for decisions or status

11 of 18

3

Cross-timezone handoffs take 3x longer than they should

9 of 18

WHO FEELS THIS

Ops leads at distributed SaaS companies, 50–500 employees

//

Current tools don't handle async workflows — we lose the thread constantly.

Solution-fit

SOLUTION

One intelligent layer across every async tool

- ✓ Unifies threads, docs, and decisions in one timeline
- ✓ AI surfaces the context you need, when you need it
- ✓ Native Slack integration — zero workflow change

Cross-team workflow graph competitors can't replicate

Before

5 tools · scattered context · slow handoffs

After

1 layer · shared context · instant handoffs

COMPETITIVE LANDSCAPE

Pulled from Market Intel · Week 1

PLAYER	CATEGORY	SHARE	STAGE	WHERE THEY FALL SHORT
L Loop	Direct	18%	Series B	Thread-level only — no cross-tool context graph
NA Notion AI	Indirect	26%	Series C	Docs-first; async decisions live outside the workspace
SH Slack Huddles	Adjacent	31%	Incumbent	Synchronous by design; no persistent decision record
R Range	Direct	7%	Seed	Standup-focused; no AI context surfacing

OUR WEDGE

Cross-team workflow graph competitors can't replicate

- ✓ Cross-tool workflow graph, not another destination app
- ✓ AI surfaces context at the moment of handoff
- ✓ Slack-native — adoption without workflow change

WHITESPACE

No incumbent owns the async handoff between tools — the seam where distributed teams actually lose hours.

TRACTION
